Drawer adjustment	Pag.7
Tall units installation	Pag.8-9
Additional sides installation	Pag.10-11

Fig. 1

STEP 1

- Please follow the exemplifying drawing to determinate the height of the bar, considering the desired installation height of the basin (in our drawing the basin is installed at 900 mm from the floor and the top is thick 12 mm).
- Place the bar in line with the wall (with the help of a spirit level). Mark with a pencil the position of the holes (see image 1). In our exemplifying drawing the holes on the wall are at H.673 mm from the floor.
- The dowels and the screws supplied by Karol can be used or not at the installer's discretion (this depends on the type of wall where the cabinet should be mounted).

**ATTENTION**

The bar's width changes according to the width of the cabinet.

Detail of the wall bar and holes

FASE 2

- Lean the cabinet against the wall and hook it to the wall bar using the hanger fittings of the cabinet (see image 1)
- Adjust the height of the cabinet (see Reg.1)
- Fix the cabinet on the wall bar using the horizontal adjustment (see Reg.2)

Fig. 1

Position of the cabinet's hangers

Fig. 2

DETAIL OF THE ADJUSTMENTS

- Height Adjustment: to level the cabinet (see Reg.1)
- Fixing the cabinet on the wall bar (see image Reg.2): moves the cabinet away from the wall and it blocks the cabinet (horizontal adjustment)

DRAWER ADJUSTMENT

IT

Adjust the drawer/s using the mechanisms indicated in the images here below.

Image A

1 - Height adjustment (up-down) of the drawer front
To adjust the vertical distance of the drawer from the cabinet .

2 - Horizontal adjustment (right-left) of the drawer front

3 - Tilting adjustment of the drawer front.
